Advania Banking Claims

Setup and instructions

Advania Banking Claims

1. Setup

The initial data for *Online Claims* solution can be download automatically with *Advania Setup Data Services* solution.

Advania Setup Data Services

Advania Setup Data Services represent service, used by most of Advania's solutions, that help us with initializing setup data. Base Setup Data Services functionality contain data service that can be used to initialize general setup data, and all other solutions has separate data service that is used to download and initialize solution specific data.

Note: Advania Setup Data Services is a part of Advania IS365 localization extension, and it won't be explained in details how it works.

The easiest way to start with *Advania Setup Data Services* functionality is to go through wizard available on **Assisted Setup** page.

Claim Templates can be found on banking solution role center under *Claim Setup* group, or from Tell me search box.

Claim Templates

If we are using *Advania Setup Data Services* solution, claim templates are automatically downloaded, but still we need to complete them to use it. From the template list we can see that we have three predefined templates, and every template represent different claim type.

| CRONUS Ísland hf. Collections ~ | Claims \lor = | | | |

- Only Import Current Identifier If specified the payment import will only import payments for the bank identifier specified in this template
- Communication Scheduler If Batch then the Job Queue is run as often as specified in the template. Usually 60 minutes between. Then there is request of sending everything that is unsent in the batch and get result for everything in the batch. If Line the Job Queue is run soon after a line is created in notice claim batch. In 60 minutes between the system also looks after weather something is unsent that need to be sent and no Job Queue exists. If so the Job Queue is created. Answers are updates or also checked line by line.

| • | Create Service Batch – is used when claim is created from service invoice when posting it |

2. INSTRUCTIONS

Claims

Like we show in this documentation, we setup two different templates for claims, so we also have two different way to create claims.

Create Claims for every Sales Invoice

Before we create claims, it is important to assign claim method code on customer.

OPEN CLAIM BATCH | WORK DATE: 4/6/2020

Open Claim Batch

In the **Claim Line Subpage**, we can see *Sales Invoices* attached to created claim. One claim can have many attached invoices if the customers have same claim payment method and if invoices are posted in same period.

On the right side, we can see **Banking Claim Batch Factbox** with an information about current claim.

Under Process group we have actions:

- Publish Batch which will publish current batch via bank service
- Get Bank Response will get bank response for claims that we send
- Delete Batch delete current batch
- Set Status Set status of claims
- *Statistics* Show statistics of current batch

Create Claim from Customer Ledger Entries

Create claim from customer ledger entries is another way to create claim, and it uses different template, connected with payment method code. Because of that first thing that we need to do, or to check, is what payment method is set on customer, for who we will create claim.

| CUSTOMER CARD WORK DATE: 4/6/2020 | | | | | | | + | Ŵ | | | | | |
